

EXPERIMENT – 8

GAS SENSOR MQ-2 IN PROTEUS USING ARDUINO

AIM: To write an Embedded C program for interfacing Gas Sensor MQ-2 using Arduino Uno and Proteus.

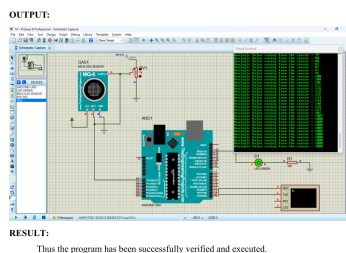

OBJECTIVES:

1. To interface the MQ-2 gas sensor with Arduino Uno.
2. To read the analog sensor value through pin A0.
3. To activate the LED when the sensor value exceeds the threshold.

PROGRAM:

```
#define GreenLed 13
#define Sensor A0
void setup()
{
    pinMode(13,OUTPUT);
    pinMode(12,OUTPUT);
    pinMode(A0,INPUT);
    Serial.begin(9600);
}
void loop()
{
    int value = analogRead(A0);
    Serial.print("Analogic Value coming from the sensor : ");
    Serial.println(value);
    delay(100);
    if(value > 600)
        digitalWrite(13,HIGH);
    else
        digitalWrite(13,LOW);
    delay(20);
}
```

OUTPUT IMAGE:

RESULT:

Thus the program has been successfully verified and executed.
